

## PowerPoint® Presentation

Create a PowerPoint® Slide Show that (depending on the topic):

- Explains a mathematical/scientific concept
- Explains an historical event
- Teaches about an animal, habitat, etc.

### Words from the Trade:

- PowerPoint®
- Slide
- Presentation
- Scanner
- Text
- Transition
- Format
- File
- Image

### Trade Hints:

- Plan what will go on each slide first in a rough draft.
- Remember to start with a title slide.
- Each slide should tell about one topic.
- The last slide should state a conclusion.
- Try to include pictures - it makes the presentation more interesting.
- Limit your text - just enough to summarize what you plan to say.
- Rehearse your presentation to practice what you will say.

### Project "Look-4s"

An excellent project has all of these elements:

- An title that grabs the audience's attention
- Evidence of planning from the rough draft to the final presentation
- Correct spelling and grammar
- Use of interesting images, transitions, and special effects
- An ending that "ties up the loose ends" of your presentation

PowerPoint® Presentation			
<b>Performance Element</b>	<b>WOW!</b> 	<b>Work Complete</b> 	<b>Work-In-Progress</b> 
<b>Title</b>	My first slide has a clear title, and the author's name	My first slide has a title only	No title
<b>Planning</b>	The draft of the presentation was used to create the final presentation	The draft of the presentation was used for part of the final presentation	No draft was written
<b>Content of slides</b>	The slides are full of interesting information	The slides have some interesting information	Little information is presented in the slides
<b>Images</b>	Each slide has an appropriate image	Some slides have appropriate images	Slides do not have images
<b>Oral presentation</b>	The oral presentation added to the information on the slides	The oral presentation added little to the information on the slides	No oral presentation
